Summarized below are the reasons why I wish to serve ASCE in this capacity and explain what I wish to accomplish as the UESI BOG 2020 President Elect.

I have been practicing Engineering for 34+ years and particularly enjoy promoting the engineering profession. I have extensive utility engineering infrastructure experience including planning, survey, utility coordination, design and contract document development, permitting, contract procurement, construction administration, operations and asset management.

Currently, I am an active ASCE Fellow and member of the UESI BOG. I’ve been past EXCOM Chair and member of the UESI Pipeline Division, Miami UESI Section Officer and original “Founding Member” of UESI.

It would be an honor and privilege to serve as the UESI 2020 President Elect. This opportunity would provide a wonderful platform to further expand my lifelong passion, drive, and ambition to mentor and give back to our Community. Coupled with my “can do” attitude, upbringing, formal education, and decades of experience directing complex utility engineering and construction projects, I could make a significant difference to expand utility industry knowledge across the globe.

With my strong technical background, proven management ability, keen business sense and recognized industry wide accomplishments, I would seek to promote the Utility Engineering field as a recognized practice and engage utility engineers, surveyors, and data management professionals to enhance the coordination, planning, delivery, and asset management of utility infrastructure systems.

With my experience and drive I plan to lead and grow our organization’s vision and goals by enhancing collaboration and fostering development of new products and services. By doing so will ensure the ASCE UESI remains the worldwide leader in our field.
